DESIGNED FOR IMPROVED EFFICIENCY

KEY FEATURES

- Three piece, cast iron construction: Heavy duty, rebuildable.
- Roller bearing design: Long product life.
- Pressure-balanced wear plates: High efficiency.
- Remote and direct mount models: Versatility.
- 2 or 3 line options: Versatility.

3 LINE DUMP SYSTEM

Many dump bodies function quite adequately with a 2-line design. However, a 3-line system includes a separate line to return hydraulic oil from the cylinder directly to the reservoir instead of forcing its way back through the inlet line.

The separate line is recommended when used for road building or stockpiling material because the 3-line pump allows faster down cycles, provides an easier method of filtering the hydraulic oil, and ultimately runs cooler.
